

## HOW TO INSTALL THE CHILD SAFE CORD EQUALIZER

1. Begin by raising your shade completely and locking it. Your string will now be at its longest length.
2. If you have the old sealed equalizer, start by snapping the equalizer in half and remove the gray clasp in the middle. **Be careful not to shorten the string. String length determines maximum shade height.** Cut or untie the existing knots, preserving as much string as possible. Keep the cord tassel (the part that is at the bottom of the equalizer) as you will reuse this part.
3. Thread one of the two cords coming out of the head rail through one half of the new equalizer.
4. Tie a small knot at the end of the cord so it cannot come out of the equalizer
5. Thread the second of the two cords coming out of the head rail through the second half of the new equalizer.

6. Tie a small knot at the end of the cord so it cannot come out of the equalizer
7. Take the tassel end that you set aside previously and tie a small knot at the end.
8. Wedge that knot in the small teeth at the bottom of the equalizer
9. Snap the two pieces together and you are done!
